The *Vegetables and Specialties Situation and Outlook* is being replaced by a bi-monthly electronic newsletter titled *Vegetables and Melons Outlook*. The first issue will be released on August 21, 2001. The Outlook will continue to be supplemented by a Yearbook (July).

---

---

---

Approved by the World Agricultural Outlook Board. Summary released July 26, 2001. The summary of the last *Vegetables and Specialties Situation and Outlook* is scheduled for release on November 15, 2001. Summaries and full text of Situation and Outlook reports may be accessed electronically via the ERS website at <http://www.ers.usda.gov>

The *Vegetables and Specialties Situation and Outlook* is published two times a year up to 2001 and supplemented by a yearbook (see note above). To order, call 1-800-999-6779 in the United States or Canada. Other areas please call (703) 605-6220. Or write ERS-NASS, 5285 Port Royal Road, Springfield, VA 22161.

(Not all prohibited bases apply to all programs). Persons with disabilities who require alternative means for communication of program information (braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326-W, Whitten Building, 14th and Independence Avenue, SW, Washington, DC 20250-9410 or call (202) 720-5964 (voice and TDD). USDA is an equal opportunity provider and employer.

## Summary

Lower harvested acreage is expected to reduce supplies for many major vegetables in 2001. The reduced acreage comes from a variety of reasons, ranging from last years oversupply creating burdensome stocks and low prices, to rising production costs that are at least partially due to energy and water shortages. Major vegetable commodities that are experiencing these reductions include four major processing vegetables (tomatoes, sweet corn, snap beans, and green peas), potatoes, and dry edible beans. Most of these crops are likely to realize significant declines in production in 2001, which should lead to higher grower prices in the coming year. In contrast, summer acreage for fresh-market vegetables has increased in 2001, a response to stronger grower prices since late last year.

Processors of five major vegetables (tomatoes, sweet corn, snap beans, green peas, and cucumbers for pickles) expect to contract for 1.23 million acres in 2001—down 10 percent from a year ago (for comparable States). Most of the decline will come from canning vegetables (down 13 percent), as processors respond to burdensome inventories and weak wholesale prices. U.S. tomato processors expect to contract for 9 percent fewer acres, while several other major world producers (largely in the European Union) anticipate slightly higher packs this year.

Processors also plan to reduce sweet corn contract area 4 percent, with all of the reduction in area for canning (down 9 percent). Similarly, snap bean area is down 10 percent, with canning (down 26 percent) accounting for the entire decline. Snap bean area for freezing is expected to rise 35 percent from last seasons low level.

Contract area for green peas is expected to drop 27 percent as area for canning (down 32 percent) and freezing (down 22 percent) each decline. Assuming average acreage losses and trend yields this coming season, output of the five leading processing vegetables could be 10 to 14 percent lower than a year ago and total around 14 million short tons.

California produces 94 percent of the Nation's processed tomato products, and processors there report contracting for 9.2 million tons of processing tomatoes in 2001. This is 9-percent less than a year ago but is up from the 8.9-million tons forecast for California in April. The increase over earlier expectations largely reflects the acquisition and reopening of a closed plant by a leading tomato paste manufacturer. California's processing tomato acreage is expected to drop 11 percent to 255,000 acres, with average yield forecast at 36.08 tons per acre—just under the record levels of the previous 2 years. Fresno (39 percent) and Yolo (16 percent) counties represent more than half of the total processing tomato area. The smaller domestic pack and increased exports should help reduce stocks and strengthen wholesale

tomato product prices in the coming year. During the first 4 months of 2001, tomato product export volume was up 17 percent from a year earlier with average value per unit down 5 percent.

Field preparation for processing tomatoes was slowed by wet weather this spring. Planting started in early February, and as of mid-March processing tomatoes were reported in good condition. However, between mid-March and May, portions of the crop were hit by hail and wind. In May, a heat wave with temperatures over 100 degrees F. damaged some plants. Some of these damaged plants were then hit by disease with a small amount of area being lost and not replanted. Although California's harvest season began a week or two later than usual, the remainder of the tomato crop is reported in good condition.

The first estimate of 2001 contract production for processing green peas indicated a 29-percent decline from a year earlier to 374,370 short tons. Estimated area for harvest was down 27 percent, with acreage down in every major State except New York. Despite cool, wet weather in Wisconsin and pockets of dry weather elsewhere, green pea yields are forecast to be second only to last year's record high. Driven by higher stocks and lower wholesale prices over the past year, the decline in green pea output will be felt in both the canning and freezing markets. Green pea production is expected to drop in all major States, including Oregon (down 40 percent), Wisconsin (down 35 percent), and Washington (down 24 percent).

U.S. fall-season potato growers expect to harvest 9 percent fewer acres in 2001. Reduced area for harvest is expected in most States, including California (down 71 percent), Minnesota (14 percent), Idaho (11 percent), Colorado (10 percent), Washington (8 percent), and North Dakota (4 percent). Increased acreage is expected in New York (up 8 percent) and Pennsylvania (4 percent). During the March to May period, when most fall-season potatoes were being planted, U.S. shipping-point prices for all potatoes averaged \$5.88 per hundredweight (cwt), 7 percent below a year ago. To reduce stocks and improve grower returns, the U.S. Department of Agriculture (USDA) purchased about 11.1 million cwt of potatoes this spring (at somewhat less than \$1 per cwt) through a diversion program.

Summer-season potato growers expect to harvest 4 percent fewer acres this year, also the result of lower prices at the time of planting. Per-acre yields are expected to rise slightly from a year ago to 305 cwt per acre—the third consecutive summer-season record. However, with a 4-percent reduction in harvested area, summer potato production is expected to decline 3 percent. The summer crop typically accounts for close to 4

percent of all potato production, with Texas, California, Colorado, and Missouri the leading States this year.

The lower grower prices for potatoes that have caused acreage reductions in 2001 are the result of record-high potato production last year, when a combination of larger harvested area and record-high yields (for the second consecutive year) pushed U.S. potato production up 8 percent to 516 million cwt. This was the largest crop on record since the 499.3 million cwt of 1996.

Total domestic potato shipments remained about even with a year earlier during calendar 2000 but have been running just above a year earlier so far in 2001. Despite higher prices in the U.S. market, import volume of fresh-market potatoes (excluding seed) from Canada declined 18 percent in 2000. However, the volume of frozen potato imports from Canada continued to climb to another record high, rising 17 percent from a year earlier. The preliminary season-average farm price received for all 2000-crop potatoes is estimated at \$4.95 per cwt, down 14 percent from 1999/2000.

This spring, U.S. dry edible bean growers again reacted to large stocks, slow exports, and low prices by reducing area for harvest to an estimated 1.34 million acres—down 17 percent from a year earlier and the lowest acreage since 1983. Harvested area is expected to be down in each of the top six States, including North Dakota (down 16 percent), Michigan (25 percent), Nebraska (8 percent), Colorado (5 percent), Minnesota (33 percent), and California (21 percent). Production is expected to decline for the major bean classes, including pinto, navy, and Great Northern.

During the first 7 months of 2001, grower prices for dry beans averaged 3 percent above a year ago, breaking a string of three consecutive annual declines. Export volume for dry beans during the first 5 months of 2001 was up 12 percent from a year ago due to sharply higher movement of navy (up 63 percent), pinto (50 percent), and Great Northern (26 percent) beans. Among the major export markets, sales increased to the United Kingdom, France, and Mexico but declined to Japan and Canada.

U.S. sweet potato growers expect to harvest 93,100 acres this fall—down 2 percent from a year ago but still the second largest harvested area since 1985. If crop conditions remain relatively favorable this year, per-acre yields could improve from the weather-reduced lows of the past two seasons and produce a crop similar in size to a year ago (nearly 14 million cwt). Assuming production is little changed in 2001, sweet potato per capita use is expected to remain even with last year's level of 4.4 pounds.

Reduced stocks (below last year and the average of the past 5 years) and slightly higher prices for dry green peas in the Pacific Northwest are expected to result in increased acreage and a larger crop this year. Dry edible pea area harvested is

estimated to be 16 percent higher than a year ago. In increasing area, dry green pea growers were reacting to prices that have averaged 3 to 4 percent above the lows of a year earlier. Nearly all of the increase is in North Dakota (up 53 percent) with smaller gains in Idaho (up 4 percent). Production of lentils is likely to be trimmed 1 percent due to larger stocks and lower prices.

Despite a very limited domestic market and competition from lower-cost world producers, production of peas and lentils has been rapidly increasing outside of the traditional areas in the Pacific Northwest since the mid-1990s. The Midwestern States of Montana and North Dakota (with smaller volumes from Nebraska, Minnesota, and South Dakota) account for most of this volume. In 2000, Midwestern dry green pea production was estimated to be nearly as great as in the Pacific Northwest. Aside from providing new markets for traditional field crop growers, legumes such as peas and lentils are also beneficial in crop rotations as soil conditioners.

Shipping-point prices for fresh-market vegetables have generally been higher than a year ago during 2001. During the first half of the year, prices received by U.S. commercial vegetable and melon growers averaged 21 percent higher than a year earlier and 17 percent above 2 years ago. Shipping-point prices (unadjusted for inflation) for fresh-market vegetables during the first quarter averaged 39 percent above a year earlier and were the highest on record. Weather impacted vegetable growth and marketable supplies during the first half of the year. In Florida, several freezes at the start of the year reduced supplies and slowed growth, while California experienced cool temperatures early (including frost and hail damage in April) and then very hot temperatures in May, which impacted growth and quality of leafy crops and young plants. With harvest schedules disrupted, market volumes fluctuated more than usual, resulting in higher shipping-point prices during the first half of the year. Second-quarter prices averaged the second highest on record for that quarter. Shipping-point prices declined seasonally in late June and July, as traditional summer supplies came into the market from a variety of States.

This summer (largely July-September), fresh-market vegetable and melon area for harvest is forecast to rise 2 percent over a year ago. Much of the increased acreage is in New York, the second-leading summer-season producing State, with 13 percent of total harvested acreage, where harvested area is expected to be up 13 percent from a year ago. The increase reflects both a response to higher prices compared with the previous year for many fresh vegetables in early 2001, and a recovery from reduced summer-vegetable area for crops such as sweet corn, which were hindered by cool, wet weather in the spring of 2000. California, the largest summer-season State, accounting for 47 percent of this year's summer-season area, reduced acreage for harvest 2 percent due largely to reduced carrot and tomato area.

Prospective area was up for 10 of the 15 major fresh-market vegetables, with snap beans (9 percent), cabbage (6 percent), sweet corn (6 percent), watermelon (5 percent), and cauliflower (5 percent) gaining the most. Area was down for carrots (16 percent), honeydew melons (4 percent), and tomatoes (2 percent). Summer-carrot area is returning to average levels following last summer's high. Despite reduced area in California (where yields exceed the national average) and a range of weather (from excessive moisture to dryness) in various Eastern States, U.S. fresh-market vegetable and melon shipments are expected to remain strong this summer. With slower economic growth than a year ago restraining demand, summer-season fresh-market vegetable prices are expected to decline from their second-quarter highs this year and average at least a tenth below last summer's highs.

In 2001, grower cash receipts from the sale of all vegetables and melons are projected to remain near year-earlier levels. Modestly higher annual-average shipping-point prices are expected to produce a small rise in fresh-market revenue, which should offset a reduction in the value of processing vegetables. The 2000 estimate of grower cash receipts is \$16 billion—up 3 percent from a year ago and the highest on record. This represented about 17 percent of all U.S. crop receipts. In 2000, higher prices led to increasing crop values for the 25 selected fresh vegetables.

This gain outweighed declining production values for processing vegetables, dry beans, and potatoes. The value of the 25 major fresh-market vegetables and melons rose 14 percent to \$8.7 billion, while the 10 leading processing vegetables fell 14 percent to \$1.4 billion. The decline in processing value was driven by a 27-percent drop in the value of the processing tomato crop.

In 2000, despite a record-high potato crop, total U.S. vegetable and melon output declined 2 percent. With the exception of potatoes (up 8 percent) and fresh vegetables (up 1 percent), production of all aggregate vegetable categories declined. Processed vegetable output declined from the 1999 record high. Increases in fresh vegetables were led by double-digit percentage gains for artichokes, garlic, honeydew melons, broccoli, head lettuce, and watermelon. The reduction in canning vegetable production was led by a 15-percent drop in tomatoes. Record-high yields and a small increase in harvested area drove potato output to a record high in 2000, while burdensome stocks and low prices pulled dry bean production down 20 percent.

Given reduced supplies of most vegetables and melons in 2000, prices received by U.S. commercial vegetable and melon growers recovered from their 1999 lows. The index of prices received by growers for commercial vegetables (largely fresh-market) increased 11 percent in 2000 due largely to higher summer and fall-season prices. After reaching very low levels during the first quarter, shipping-point

prices averaged above a year earlier for each of the final three quarters of 2000. Variable weather conditions brought higher annual average prices for broccoli (up 29 percent), celery (up 53 percent), head lettuce (32 percent), and tomatoes (21 percent), which outweighed lower prices for carrots (down 20 percent), asparagus (11 percent), and snap beans (8 percent).

After declining in 1999, the index of retail prices for fresh-market vegetables (including potatoes) rose 5 percent in 2000. Although potato prices declined 4 percent, increases were noted for several major items, including lettuce, broccoli, and tomatoes. With transportation and energy costs also continuing to rise this spring, retail prices for fresh-market vegetables averaged 9 percent above a year earlier during the first 6 months of 2001. Average retail prices for frozen vegetables increased 5 percent during the first 6 months, largely reflecting increased marketing costs, while prices for canned vegetables rose 2 percent.

In 2000/01, sales of U.S. mushrooms are expected to rise from the record 867 million pounds sold in 1999/2000. Fresh agaricus mushrooms in 1999/2000 accounted for 78 percent of all agaricus mushroom sales volume and 86 percent of total agaricus value. With processed mushroom import volume up 29 percent in 1999/2000 (returning to levels experienced prior to the institution of dumping duties on several countries in early 1999), processing mushroom sales volume fell 2 percent. Because of rising imports and increased consumer preference for fresh mushrooms, sales of domestically-produced processing mushrooms were 27 percent below their 1992/93 peak and were the smallest since the 1988/89 season. The value of domestic mushroom sales totaled \$867 million in 1999/2000, placing the crop fourth (following potatoes, tomatoes, and lettuce) among all vegetable crops. Shiitake, oyster, and other specialty mushrooms, combined with agaricus Portobello- and Crimini-type mushrooms, now account for \$126 million in crop value—14 percent of all mushroom sales.

In 2001, per capita vegetable and melon consumption is projected to decline 2 percent from the 2000 record high. Reductions are expected to occur across all major categories, including fresh-market, canning, freezing, potatoes, and pulses. Potato use is likely to decline with the expected smaller crop this year, while reduced output of fresh market crops may also lead to reduced per capita consumption. Smaller reductions are anticipated in the use of processing vegetables, as processors reduce output and work down large stocks for items such as canned tomatoes.

In 2000, per capita use of all vegetables and melons increased 3 percent from a year earlier. Much of the gain stems from increased use of potatoes (up 6 percent), due largely to the record-large crop last fall and subsequent lower prices. Increases were also noted for vegetables for canning and sweet potatoes. Per capita use of fresh-market

vegetables was up 3 percent from 1999, due primarily to the inclusion of production estimates in 2000 for several crops previously unreported by USDA.

For a comparable set of crops however, per capita use of fresh-market vegetables in 2000 was unchanged from a year earlier. Significant increases were experienced in fresh cabbage, romaine/leaf lettuce, and bell peppers. These were offset by reduced use for melons, broccoli, and tomatoes.

Utilization of both watermelon and cantaloup declined last year as growers responded to low prices by reducing acreage and production. Preliminary estimates of potato use indicate both fresh and processing uses registered gains in 2000, with use for dehydrating gaining the most. Detailed utilization data for the 2000 potato crop will not be available until September.

Per capita use of all processing vegetables (including potatoes and mushrooms) totaled 225 pounds (fresh equivalent) in 2000, up 3 percent from a year earlier. Most of the gain was due to increased use of processing potatoes. Canning vegetable use (including potatoes and mushrooms) rose 2 percent to 107 pounds per person despite a small decline in tomatoes—the largest canning vegetable, which accounts for two-thirds of all canned vegetable use. Most other canned vegetables recorded small gains in consumption in 2000. Freezing use (including potatoes) totaled 83 pounds, up 1 percent from 1999. On average, another 32 pounds per capita of potatoes are processed into chips and dehydrated products. In 2001, utilization of processed vegetables is expected to decline 1 to 3 percent as potato use falls and higher prices for several canned products limit movement.

In 2000, the strong U.S. dollar, large world supplies, and weak demand in some key markets allowed the trade deficit in vegetable, melon, and pulse crops to continue expanding. While the value of U.S. exports increased 1 percent to \$3.3 billion, imports rose 3 percent to \$4.1 billion. Exports last exceeded imports in 1995. In 2000, U.S. vegetable, melon, and pulse imports from Mexico increased 2 percent, but Mexico's share of U.S. imports of these items dropped from 46 to 45 percent. Mexico has been losing market share to Canada over the past few years, with imports from Canada rising 19 percent in 2000, driven largely by fresh greenhouse vegetables, frozen potatoes, and canned sweet corn. Canada's share of the U.S. vegetable and melon import market rose from 21 to 24 percent. The value of canned vegetable exports exceeded imports in 2000, as larger U.S. processing tomato crops led to lower prices. In 2000, processed tomato import volume fell 57 percent to a more usual level of 0.6 billion pounds (fresh-weight equivalent)—about 3 percent of total domestic use. Over the previous 3 years, imports averaged about 5 percent of processing tomato use and are projected to account for about 4 percent in 2001.

In 2000, the United States exported nearly 8 percent of its fresh-market vegetable and melon supplies (production plus imports), up from 7 percent during the previous 3 years. On the other side of the ledger, large domestic output and low market prices helped reduce the import share of consumption to 14 percent of fresh vegetable supplies, compared with 15 percent a year earlier. Despite lower prices and burdensome stocks, about 7 percent of canned vegetable supplies were exported in 2000—the same as a year earlier but down from 8 percent 2 years ago. In 2000, with tomato product prices down due to larger output in 1999, only about 8 percent of vegetables used in canned form were imported, compared with 11 percent the previous year and 7 percent in 1990. In 2000, nearly 9 percent of vegetables for freezing (excluding potatoes) were exported—the same as a year earlier but up from 6 percent in 1990. Dropping slightly from 1999, imports (excluding potatoes) accounted for 19 percent of domestic frozen vegetable consumption last year, with broccoli accounting for 41 percent of frozen vegetable imports.

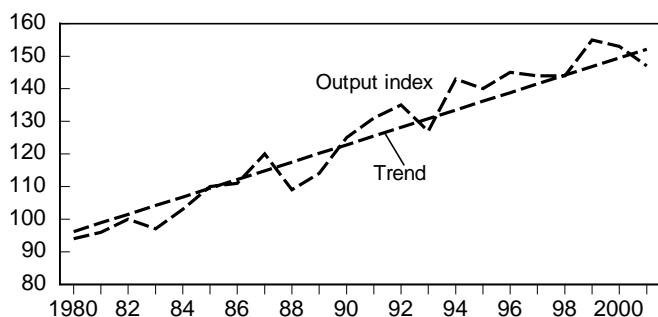

The net value of potato trade (export value minus import value) eroded in 2000, totaling \$268 million, down from \$386 million in 1999. The value of potato and potato-product imports increased 19 percent to \$500 million due primarily to continued double-digit increases in frozen french fry imports from Canada. On the export side, the value of 2000 potato and potato-product exports fell 5 percent to \$768 million due to a drop (down 63 percent) in potato flake exports. On a fresh-weight-equivalent basis, the volume of all potato exports totaled 45 million cwt, down 18 percent from 55 million in 1999. Frozen products accounted for 23 million cwt, up 7 percent, while dried and dehydrated products (excluding starch) returned to more normal levels, dropping 59 percent and accounting for about 8 million cwt. For the first 4 months of 2001, the volume of potato imports dropped 21 percent with fresh and seed potatoes each down and the pace of imports vastly slowed for frozen french fries (up just 7 percent). At the same time, export volume fell 1 percent due to reduced sales of chips, seed, and flakes.

The value of U.S. vegetable exports to China and Hong Kong, combined, (including potatoes, melons, pulses, mushrooms, and vegetable seed) totaled \$99 million in 2000, down 5 percent from a year earlier. Six commodities accounted for two-thirds of the vegetables exported to China and Hong Kong. The major items exported were frozen french fries (\$33 million), potato chips (\$16 million), lettuce (\$8 million), celery (\$7 million), frozen sweet corn (\$5 million), and canned sweet corn (\$5 million). Import value from China and Hong Kong fell 7 percent to \$133 million, with two-thirds of the total consisting of canned and dehydrated products such as water chestnuts, dehydrated garlic, and bamboo shoots.

## Glossary of Specialized Terms

**Arrivals:** Quantity of produce received by wholesalers and chain stores in selected cities, as shipped from major production areas.

**Carryover stocks:** The quantity of product remaining in storage at the end of the crop year.

**Cash receipts:** The value of commodity marketings during the calendar year, irrespective of the year of production. For program crops, also includes net CCC loans (there are none for vegetables or potatoes).

**C.I.F. value:** (Cost, insurance, and freight). Terms of sale whereby the seller's (exporter) price includes the cost of the goods being sold and all transportation charges, including insurance expenses, to the destination point (importer).

**Cold storage:** The quantity of product in refrigerated warehouses at a point in time.

**Constant 1996 dollars:** Expression of value in terms of 1996 purchasing power. Frequently referred to as deflated or real dollars.

**Contract acreage:** Area planted by agreement between processors and growers, generally at an agreed price and conditions, including quality.

**Cwt:** Abbreviation for hundredweight, a unit of measure equal to 100 pounds.

**Dual-purpose vegetables:** Commodities that may be sold in fresh or processing markets. Dual commodities include asparagus, broccoli, cauliflower, and celery.

**Dumping:** The sale of a commodity in a foreign market at less than fair market value.

**Fall season:** Production period which mainly spans October to December.

**Farm weight:** The raw or unprocessed weight of a product in fresh form prior to any processing; also called fresh-weight, field-run, or orchard-run.

**F.A.S. value:** (free alongside ship). A price quotation that includes all costs of transportation and delivery of the goods to the dock alongside the ship (within reach of the ship's tackle).

**F.o.b. shipping-point price:** The average, unweighted unit price received by the shipper or grower-shipper primarily for sales in carload or truckload quantities, but also including mixed loads.

**Fresh-cut vegetables (fresh-processed):** Fresh-market vegetables that have been trimmed, peeled, or cut (but not heated) into a completely usable fresh product, which is marketed in a prepackaged form. Examples include bagged salads, baby peeled carrots, and broccoli florets.

**Fresh-market vegetables:** Sold primarily as fresh; includes artichokes, asparagus, green lima beans, snap beans, broccoli, Brussels sprouts, cabbage, cantaloupes, carrots, cauli-

flower, celery, sweet corn, cucumbers, eggplant, escarole and endive, garlic, radishes, honeydews, lettuce, onions, bell peppers, spinach, tomatoes, and watermelons. Includes fresh-cut products such as baby carrots and bagged salads.

**Grower-packer return:** Price received by the grower-packer.

**Marketing spread:** The difference between the retail price and the grower-packer return.

**Pack:** The quantity of fresh or processed product placed in containers (e.g., cans). Generally refers to the output of a processing industry (e.g., frozen pack of broccoli).

**Pay weight:** The weight of useable product delivered to the processing plant and paid for at the rates specified by contract.

**Per capita use:** A measure of commodity disappearance on a per-person basis. Equal to total supply (production plus imports plus beginning stocks) less uses (exports, shrink and loss, seed use, ending stocks) divided by total U.S. population (including military).

**Processing vegetables:** Commodities sold primarily to processors; include (but not limited to) green lima beans, snap beans, beets, cabbage, sweet corn, cucumbers, chile peppers, green peas, spinach, and tomatoes.

**Product weight:** The weight of a product in its final packaged form. For example, the weight of the contents of a can of tomato paste.

**Pulses:** A term used collectively for dry edible beans, dry edible peas, and lentils.

**Season-average price:** Average price received by the grower-packer (grower-shipper), weighted by quantity marketed.

**Shipments:** Quantity of produce marketed from major production areas.

**Short ton:** A unit of measure equal to 2,000 pounds. A metric ton is equal to 1,000 kilograms or 2,204.62 pounds.

**Specialties:** A term for commodities (limited here to vegetables) not generally considered to be mainstream. Examples include jicama, dasheen, and cassava. May also include "minor vegetables," such as okra, chile peppers, pumpkins, and tropical vegetables.

**Spring season:** Production period which mainly spans April to June.

**Summer season:** Production period which mainly spans July to September.

**Value of production:** The value of commodities produced during the crop year. Calculated as production times marketing-year-average price. May be equal to cash receipts when the crop year for a vegetable runs from January through December.

**Winter season:** Production period which mainly spans January to March.

## List of Tables

### Industry

1. U.S. per capita use of selected, commercially produced, fresh, and processing vegetables and melons, 1971-2001 .....	12
2. Vegetables: U.S. cash receipts, 1977-2000 .....	14

### Fresh Vegetables

3. Vegetables, fresh market: Harvested acreage of major vegetables, 1977-2000 .....	15
4. Vegetables, fresh market: Production of major vegetables, 1977-2000 .....	16
5. Vegetables, fresh market: Value of production of major vegetables, 1977-2000 .....	17
6. Fresh-market production of selected vegetables for selected States, 1981-2000 .....	18
7. Vegetables, fresh market: Selected shipments, 1988-2000 .....	19
8. Vegetables, fresh market: U.S. monthly and annual producer price index, 1977-2001 .....	20
9. Vegetables, fresh market, including potatoes: U.S. monthly and annual Consumer Price Index, 1977-2001 .....	20
10. Vegetables, fresh-market: U.S. imports of major vegetables, 1976-2000 .....	21
11. Selected fresh vegetables: U.S. import value from selected countries and the world, 1997-2000 .....	22
12. Vegetables, commercial: U.S. monthly and annual average shipping-point price index, 1977-2001 .....	23
13. Vegetables, fresh market: Selected U.S. monthly and annual imports, 1977-2001 .....	23
14. Vegetables, fresh market: U.S. per capita utilization, 1977-2001 .....	24
15. Vegetables, fresh market: Selected U.S. exports, 1977-2000 .....	25
16. Selected fresh vegetables: U.S. export value to selected countries and the world, 1995-2000 .....	26
17. Vegetables, fresh market: Selected U.S. monthly and annual exports, 1977-2001 .....	28
18. Asparagus, fresh market: U.S. monthly and season-average f.o.b. shipping-point price, 1977-2001 .....	28
19. Broccoli, fresh market: U.S. monthly and season-average f.o.b. shipping-point price, 1977-2001 .....	29
20. Carrots, fresh market: U.S. monthly and season-average f.o.b. shipping-point price, 1977-2001 .....	29
21. Carrots, fresh market: U.S. monthly and annual retail price, 1976-2000 .....	30
22. Cauliflower, fresh market: U.S. monthly and season-average f.o.b. shipping-point price, 1977-2001 .....	30
23. Celery, fresh market: U.S. monthly and season-average f.o.b. shipping-point price, 1977-2001 .....	31
24. Celery, fresh market: U.S. monthly and annual retail price, 1976-2000 .....	31
25. Head lettuce, fresh market: U.S. monthly and season-average f.o.b. shipping-point price, 1977-2001 .....	32
26. Lettuce, iceberg, fresh market: U.S. monthly and annual retail price, 1977-2001 .....	32
27. Lettuce, fresh market: U.S. monthly and annual retail price index, 1977-2001 .....	33
28. Lettuce, fresh market: U.S. monthly and annual imports, 1977-2001 .....	33
29. Onions, fresh market: U.S. monthly and season-average f.o.b. shipping-point price, 1977-2001 .....	34
30. Onions, fresh market: U.S. monthly and annual retail price, 1976-1998 .....	34
31. Onions, fresh market: U.S. monthly and annual imports, 1977-2001 .....	35
32. Sweet corn, fresh market: U.S. monthly and season-average f.o.b. shipping-point price, 1977-2001 .....	35
33. Tomatoes, fresh market: U.S. monthly and season-average f.o.b. shipping-point price, 1977-2001 .....	36
34. Tomatoes, fresh market: U.S. monthly and annual retail price, 1977-2001 .....	36
35. Tomatoes, fresh market: U.S. monthly and annual retail price index, 1977-2001 .....	37
36. Tomatoes, fresh market: U.S. monthly and annual imports, 1977-2001 .....	37
37. Melons, fresh market: U.S. monthly and annual imports, 1977-2001 .....	38
38. Cabbage, fresh market: U.S. monthly and annual retail price, 1976-2000 .....	38
39. Cucumbers, fresh market: U.S. monthly and annual retail price, 1976-2000 .....	39
40. Green peppers, fresh market: U.S. monthly and annual retail price, 1976-2000 .....	39

## **Fresh and Frozen Supply and Use**

41. U.S. fresh tomatoes: Supply, utilization, and price, farm weight, 1977-2001 .....	40
42. U.S. fresh bell peppers: Supply, utilization, and price, farm weight, 1977-2001 .....	40
43. U.S. fresh head lettuce: Supply, utilization, and price, farm weight, 1977-2001 .....	41
44. U.S. leaf and romaine lettuce: Supply, utilization, and price, farm weight, 1990-2001 .....	41
45. U.S. fresh onions: Supply, utilization, and price, farm weight, 1977-2001 .....	42
46. U.S. fresh sweet corn: Supply, utilization, and price, farm weight, 1977-2001 .....	42
47. U.S. fresh carrots: Supply, utilization, and price, farm weight, 1977-2001 .....	43
48. U.S. fresh broccoli: Supply, utilization, and price, farm weight, 1977-2001 .....	43
49. U.S. fresh cauliflower: Supply, utilization, and price, farm weight, 1977-2001 .....	44
50. U.S. fresh asparagus: Supply, utilization, and price, farm weight, 1977-2001 .....	44
51. U.S. fresh celery: Supply, utilization, and price, farm weight, 1977-2001 .....	45
52. U.S. fresh cucumbers: Supply, utilization, and price, farm weight, 1977-2001 .....	45
53. U.S. fresh cabbage: Supply, utilization, and price, farm weight, 1977-2001 .....	46
54. U.S. artichokes, all uses: Supply, utilization, and price, farm weight, 1977-2001 .....	46
55. U.S. eggplants, all uses: Supply, utilization, and price, farm weight, 1977-2001 .....	47
56. U.S. garlic, all uses: Supply, utilization, and price, farm weight, 1977-2001 .....	47
57. U.S. fresh-market snap beans: Supply, utilization, and price, farm weight, 1977-2001 .....	48
58. U.S. fresh-market spinach: Supply, utilization, and price, farm weight, 1977-2001 .....	48
59. U.S. fresh-market potatoes: Supply, utilization, and price, farm weight, 1977-2001 .....	49
60. U.S. honeydews: Supply, utilization, and price, farm weight, 1977-2001 .....	49
61. U.S. cantaloupes: Supply, utilization, and price, farm weight, 1977-2001 .....	50
62. U.S. watermelons: Supply, utilization, and price, farm weight, 1977-2001 .....	50
63. U.S. asparagus for freezing: Supply, utilization, and price, farm weight, 1977-2001 .....	51
64. U.S. broccoli for processing: Supply, utilization, and price, farm weight, 1977-2001 .....	51
65. U.S. cauliflower for processing: Supply, utilization, and price, farm weight, 1977-2001 .....	52
66. U.S. green peas for freezing: Supply, utilization, and price, farm weight, 1977-2001 .....	52
67. U.S. snap beans for freezing: Supply, utilization, and price, farm weight, 1977-2001 .....	53
68. U.S. sweet corn for freezing: Supply, utilization, and price, farm weight, 1977-2001 .....	53
69. U.S. potatoes for freezing: Supply and utilization, farm weight, 1977-2001 .....	54
70. U.S. tomatoes for processing: Supply, utilization, and price, farm weight, 1977-2001 .....	54
71. U.S. cucumbers for pickles: Supply, utilization, and price, farm weight, 1977-2001 .....	55
72. U.S. sweet potatoes, all uses: Supply, utilization, and price, farm weight, 1977-2001 .....	55

## **Fresh Marketing Spreads**

73. Carrots: U.S. monthly average retail price, marketing spread, and shipping-point price, 1977-2000 .....	56
74. Celery: U.S. monthly average retail price, marketing spread, and shipping-point price, 1977-2000 .....	56
75. Broccoli: U.S. monthly average retail price, marketing spread, and shipping-point price, 1995-2001 .....	57
76. Lettuce, iceberg: U.S. monthly average retail price, marketing spread, and shipping-point price, 1977-2001 .....	57
77. Tomatoes, fresh field-grown: U.S. monthly average retail price, marketing spread, and shipping-point price, 1977-2001 .....	58
78. Potatoes, fresh: U.S. retail price, marketing spread, and grower-packer return, 1977-2001 .....	58

## **Processing Vegetables**

79. Vegetables, selected: Fresh and processing per capita utilization, 1977-2001 .....	59
80. Vegetables, processing: Harvested acreage for canning and freezing, 1977-2000 .....	60
81. Vegetables, processing: Production for canning and freezing, 1977-2000 .....	61
82. Vegetables, processing: Value of production for canning and freezing, 1977-2000 .....	62
83. Vegetables, processing: Raw product prices for canning and freezing, 1977-2000 .....	63
84. Vegetables, processed: U.S. monthly and annual retail price index, 1983-2001 .....	64
85. Vegetables, processing: Selected U.S. per capita utilization, 1977-2001 .....	65
86. Vegetables, dehydrated: U.S. monthly and annual producer price index, 1977-2001 .....	66
87. Vegetables, canned: U.S. monthly and annual producer price index, 1977-2001 .....	66
88. Vegetables, canned: Selected U.S. imports, by type, 1977-2000 .....	67
89. Vegetables, canned: Selected U.S. exports, by type, 1977-2000 .....	67
90. Selected canned vegetables: U.S. export value to selected countries and the world, 1996-2000 .....	68
91. Selected canned vegetables: U.S. import value from selected countries and the world, 1996-2000 .....	69
92. Vegetables, frozen: Pack and carryover, 1977-2000 .....	70
93. Vegetables, frozen: Annual pack of major vegetables, 1977-1999 .....	70
94. Vegetables, frozen: January 1 stocks of major vegetables, 1977-2001 .....	71
95. Vegetables, frozen: U.S. monthly and annual producer price index, 1977-2001 .....	71
96. Vegetables, frozen: U.S. imports, by type, 1977-2000 .....	72
97. Vegetables, frozen: U.S. exports, by type, 1978-2000 .....	72
98. Selected frozen vegetables: U.S. import value from selected countries and the world, 1996-2000 .....	73
99. Selected frozen vegetables: U.S. export value to selected countries and the world, 1995-2000 .....	74

## **Potatoes and Sweet Potatoes**

100. Potatoes: Harvested acreage, by season, 1977-2001 .....	75
101. Potatoes: Production, by season, 1977-2001 .....	75
102. Potatoes, all seasons: Production, by major State, 1977-2000 .....	76
103. Potatoes: all seasons: Crop-year utilization, 1977-2000 .....	76
104. Potatoes: Season-average price and value of farm sales by season, 1977-1999 .....	77
105. Potatoes, all: U.S. monthly and season-average grower price, 1979-2001 .....	78
106. Potatoes, fresh market: U.S. monthly and annual retail price index, 1977-2001 .....	79
107. Potatoes: frozen french fries: U.S. monthly and annual producer price index, 1977-2001 .....	79
108. Potatoes: U.S. monthly retail price, by product, 1980-2001 .....	80
109. Potatoes: Selected U.S. imports, by type, 1977-2000 .....	81
110. Potatoes: Selected U.S. exports, by type, 1977-2000 .....	81
111. Potatoes: U.S. per capita utilization, by category, 1977-2001 .....	82
112. Sweet potatoes: Production, by State, 1977-2000 .....	82
113. Sweet potatoes: U.S. acreage, yield, production, and value, 1977-2001 .....	83

## **Pulses**

114. Dry edible beans: Harvested acreage, by State, 1977-2001 .....	83
115. Dry edible beans: Production, by class, 1977-2000 .....	84
116. Dry edible beans: Production, by State, 1977-2000 .....	84
117. Dry edible beans: Value of production, by State, 1977-2000 .....	85
118. Dry edible beans: Season-average wholesale price, by class, 1977-2000 .....	85
119. Dry edible beans: U.S. monthly and season-average grower price, 1977-2001 .....	86

120. Dry edible beans: U.S. imports, by class, 1977-2001 .....	86
121. Selected dry beans: U.S. export value to selected countries and the world, 1997-2000 .....	87
122. Dry edible beans: U.S. exports, by class, 1977-2001 .....	88
123. Dry edible beans: U.S. per capita use for selected classes, 1977-2001 .....	88
124. Dry peas and lentils: U.S. planted acreage, by class, 1977-2000 .....	89
125. Dry peas and lentils: Yield, by class, 1977-2000 .....	89
126. Dry peas and lentils: Production, by class, 1977-2000 .....	90
127. Dry peas and lentils: Grower price, by class, 1977-2000 .....	90
128. Dry peas and lentils: U.S. exports, by class, 1977-2000 .....	91
129. Dry peas and lentils: U.S. imports, by class, 1977-2000 .....	91

## **Mushrooms**

130. Mushrooms: Production, by type of sale, 1977/78-1999/2000 .....	92
131. Mushrooms: Price and value, by type of sale, 1977/78-1999/2000 .....	92
132. Mushrooms: U.S. monthly and annual imports, 1981-2001 .....	93
133. Mushrooms, canned: U.S. monthly and annual exports, 1978-2001 .....	94
134. Mushrooms, all: U.S. per capita utilization, 1977-2001 .....	94
135. Specialty mushrooms: Price and value, by type of sale, 1986/87-1999/2000 .....	95

## **Specialties and World Production**

136. Specialty vegetables: Fresh and processed imports, 1980-2000 .....	95
137. Specialty and minor vegetables, fresh and processed: Harvested acreage, California, 1985-1999 .....	96
138. Specialty and minor vegetables, fresh and processed: Production, California, 1985-1999 .....	97
139. Specialty and minor vegetables, fresh and processed: Value of production, California, 1985-1999 .....	98
140. Specialty vegetables, fresh market: U.S. domestic and imported shipments, 1985-2000 .....	99
141. Selected vegetable production in leading countries and the world, 1992-2000 .....	100

f = Forecast. -- = Not available.

1/ All production for processing broccoli and cauliflower is for freezing. 2/ Industry allocation suggests that 27 percent of processing carrot production is for canning and 73 percent is for freezing. 3/ On-cob basis. 4/ In-shell basis. 5/ Includes artichokes, brussels sprouts, eggplant, endive/escarole, garlic, radishes, green limas, squash, and spinach. In 2000, okra, pumpkins, kale, collards, turnip greens and mustard greens added. 6/ Includes beets, green limas (1992-2001), spinach, and miscellaneous imports (1990-2001). 7/ Includes green limas, spinach, and miscellaneous freezing vegetables. 8/ Fresh, canning, and freezing data do not sum to the total because onions for dehydrating are included in the total. 9/ Production from new areas in upper midwest added in 1998. A portion of this may be for feed use. Source: Economic Research Service, USDA.

-- = Not available.

1/ Includes processing production in California. 2/ Also includes production for processing uses. 3/ Data for 1982-91 are from the State Statistical Offices.

Texas did not collect data for some crops in 1988 and 1989. NASS reinstated national data collection in 1992.

1/ Indexes of retail prices paid in major U.S. cities. This index includes potatoes. 2/ Simple 12-month average. 3/ Data beginning in

1978 are for all urban consumers; earlier data are for urban wage earners and clerical workers.

Source: Bureau of Labor Statistics, U.S. Department of Labor.

p = Preliminary. 1/ Excludes melons, potatoes, and mushrooms.

2/ Monthly distribution as reported by the Census is partly in error for 1976, 1980, 1981, and 1986.

For July and August of 1981 and May of 1986, some quantities are included that actually arrived in earlier months. 3/ Import data beginning January 1989 are reported under the Harmonized Tariff Schedule (HS) of the U.S. Department of Commerce.

1/ Monthly distribution as reported by the Census Bureau is partly in error for 1981 and 1986. For July and August of 1981 and May of 1986, some quantities are included that actually arrived in earlier months. 2/ Import data beginning January 1989 are reported under the Harmonized Tariff Schedule (HS) of the U.S. Department of Commerce.

-- = Not available. f = ERS forecast. r = Revised.

1/ Source: National Agricultural Statistics Service, USDA. Production was adjusted by ERS for 1970-81 to account for States not included in NASS estimates. Excludes domestically-grown hothouse tomatoes. 2/ Source: Bureau of the Census, U.S. Department of Commerce. From 1978-89, U.S. exports were adjusted using Canadian import data. 3/ Includes shipments to U.S. territories from 1978-88. These were previously included in U.S. export statistics.

4/ Constant dollar prices were calculated using the GDP implicit price deflator, 1996=100.

-- = Not available.

1/ Exports are in product weight as reported by Census. Due to under-reporting, U.S. exports to Canada prior to 1990 may be understated. 2/ Excludes shelled beans. 3/ Data were converted from gallons using a factor of 8.485 pounds per gallon. 4/ Tomato products not elsewhere classified.

For 1989 to 1999, represents whole tomatoes.

p = Preliminary.

1/ Beginning with 2000, Nebraska summer area is included with fall, Wyoming was dropped from the fall estimates program,

Iowa summer estimates were discontinued, Alabama spring estimates were moved to summer, North Carolina

summer estimates were grouped with spring estimates, and estimates for Kansas summer potatoes began.

-- = Not available.

1/ Exports of processed potatoes are in product weight as reported by the Bureau of the Census. 2/ Includes fresh seed. Data for 1978 to 1989 incorporate data on Canadian imports of U.S. potatoes. 3/ Includes corn chips prior to 1978. 4/ Excludes flour and starch. Flour/meal was 11.6 mil. lb. in 2000.

-- = Not available. f = ERS forecast.

1/ Crop year begins September 1 and ends August 31. 2/ From 1970 to 1988, includes dried, desiccated, and dehydrated peas, other than split peas. After 1988, under the Harmonized Tariff Schedule, includes the sum of green and yellow peas (excluding split). 3/ From 1970 to 1988, includes green and yellow peas.

After 1988, includes split peas only. 4/ Includes Austrian winter peas, misc. dry peas, and dry pea and lentil seeds. 5/ Pea data series broken following the 1987/88 season due to the January 1989 change to the harmonized system.
